COMPASS

Community Prevalence of SARS-CoV-2 Study

This study will collect blood samples to find out how many people in the community have been exposed to SARS-CoV-2, the virus that causes COVID-19.

- 1 Blood samples are shipped to **Baltimore, Maryland**, where they are tested for SARS-CoV-2 antibodies.
- 2 Antibody testing for this study can take place up to **six months** after blood samples are taken.
- 3 The antibody test used in this study is not approved for medical management of COVID-19.
- 4 Antibodies from prior SARS-CoV-2 infection may provide short-term protection from getting the virus again, but more research is needed to find out if and how long the protection lasts.

For these reasons, antibody **test results will not be returned** to participants.

More information about the role of SARS-CoV-2 antibody testing can be found at the Centers for Disease Control and Prevention (CDC) COVID-19 Resource Page at:
